

March 30, 2013

I am delighted to write about a new 'discovery' for my husband and myself. Fluid Dynamics.

We own two homes, one in Florida and one in California. Both now have the Housetron System installed in our incoming water source.

We were introduced to this product in Florida. A place where water issues are not only notorious but prevalent. We had just spent significant funds remodeling our home and installing a tank-less water heater and we wanted to ensure it's useful life, free of the known problems in the area. We couldn't be happier with this product. We are now several years in residence and are very satisfied with the results so far.

So happy, in fact that we wanted to do the same for our home in California. We have issues here as well with hard water and scale being the major offenders. Having dealt with these issues in commercial property, I am very aware of the costly process of water softener systems and the ongoing problems with hard water scale. We hired our trusted plumber to do the installation in our home and were surprised to learn he too is impressed with the Fluid Dynamics system and touted its effectiveness in resolving some pesky problems with the state's water supply. And THAT from a gentleman who made weekly visits to my former place of business.....had I known about the Housetron System then I could have saved a bundle of money for the company! But it's never too late to learn!

Thank you for your time in reading this and thank you more for making a system that is simple, uncomplicated and works! A great concept indeed!

Sincerely,

Dayle and Kenneth Glass
