

Installation Configurations

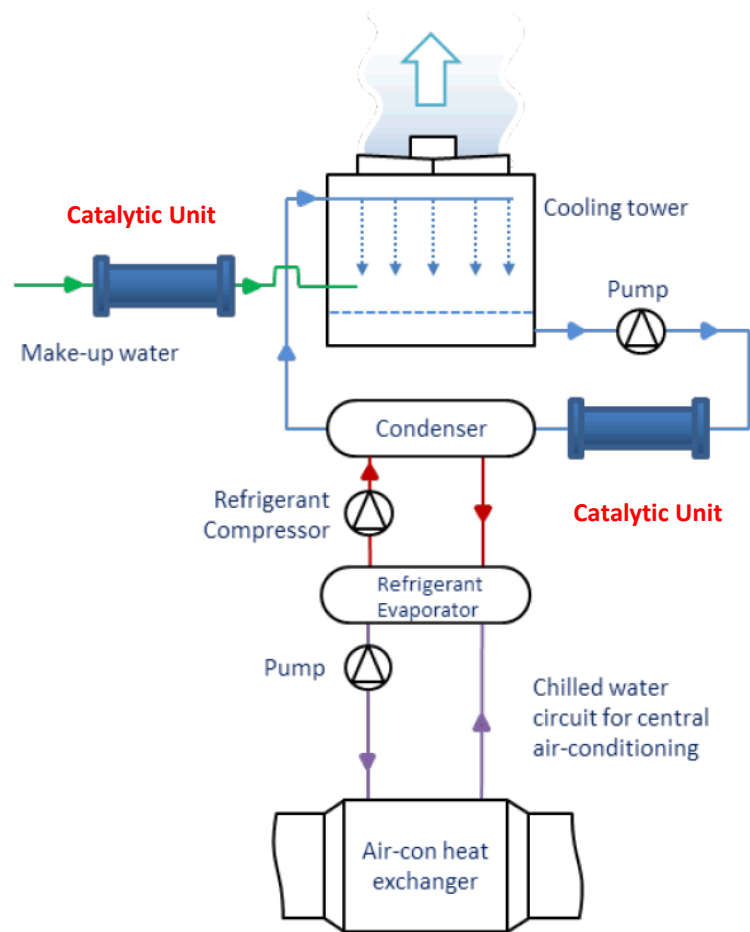

Hot water / low pressure steam for heating

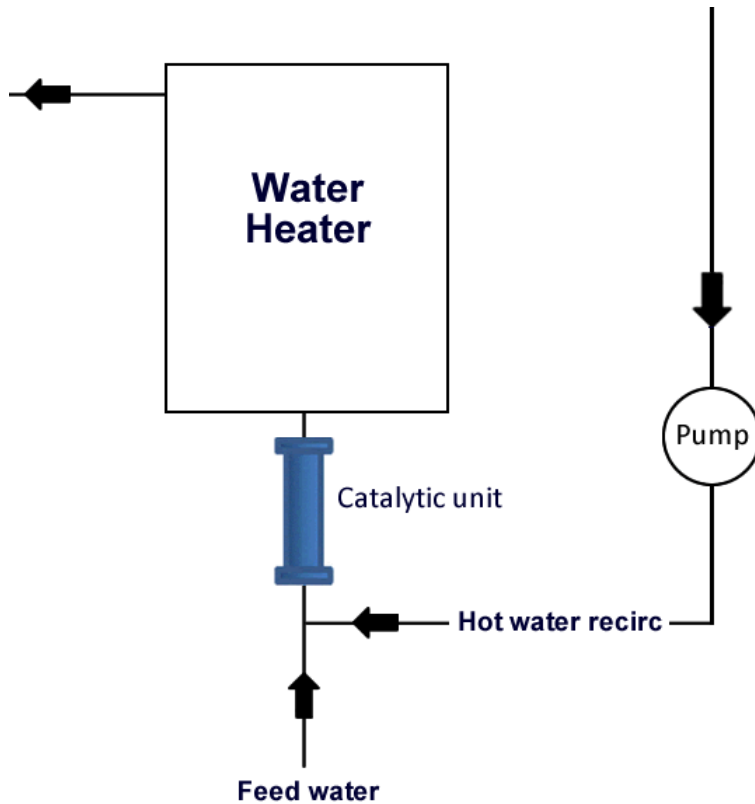

Central Air-conditioning

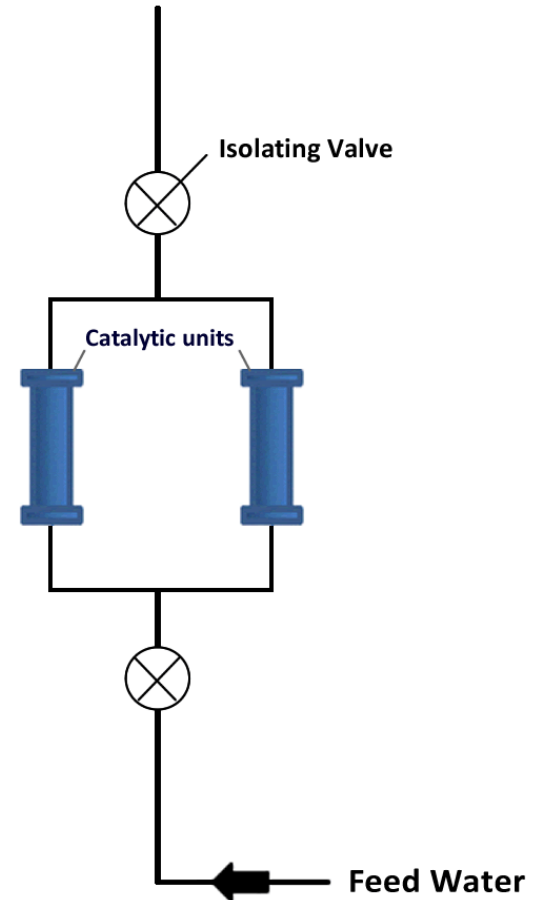

Water heater with recirculating line

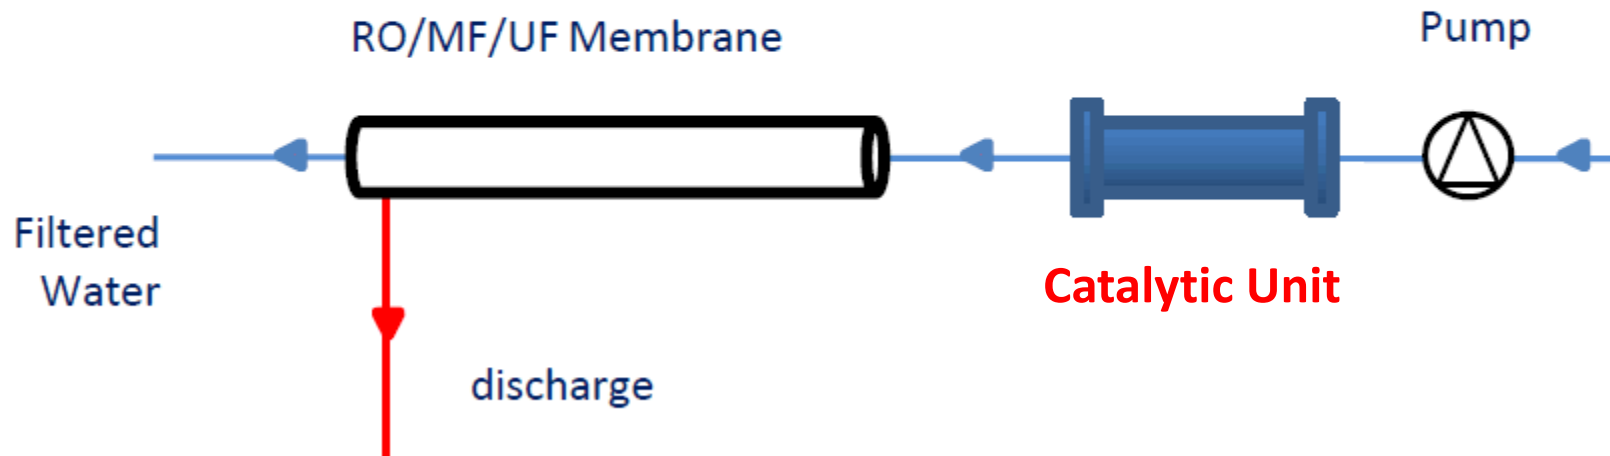

Units in a manifold configuration

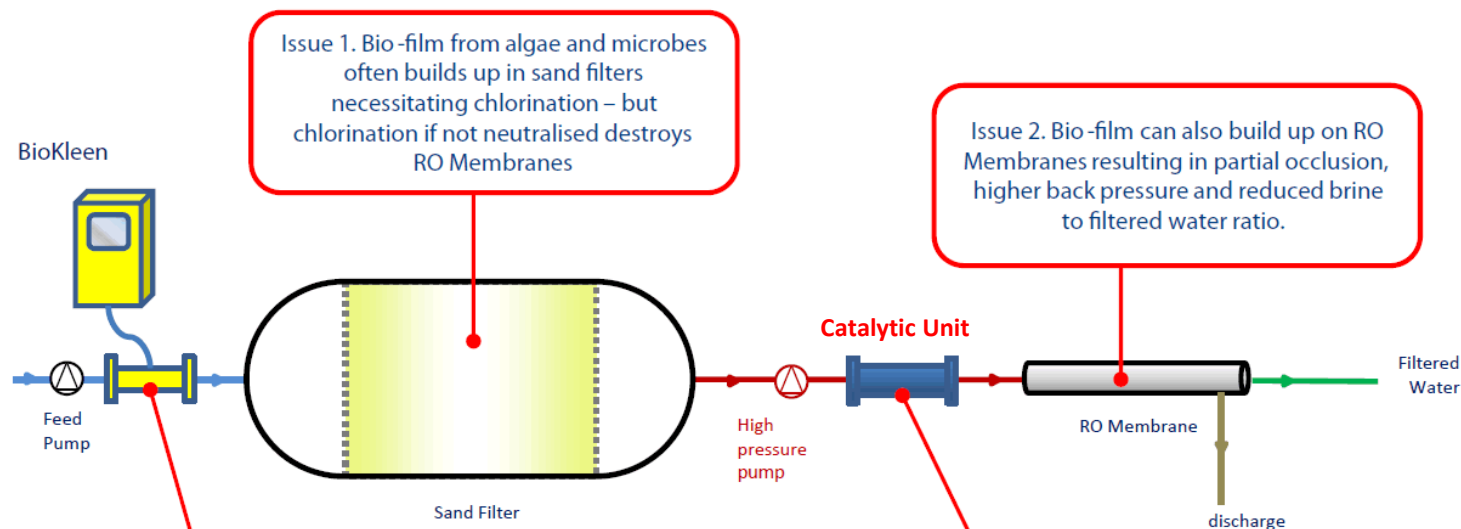

Reverse Osmosis / Ultra filtration

Reverse Osmosis / Desalination Plant with Sand pre-filtration

The solution: BioKleen uses Silver ions to treat the feed water stopping biofilm growth in sand filters and RO membranes down stream. Silver ions are harmless to RO Membranes and are ultimately flushed out with discharge water/brine

Catalytic Unit works with BioKleen giving a solution to scale formation – both solutions being chemical free, harmless to the RO membrane and virtually no maintenance
