

Fluid Dynamics since
1973

Fluid Dynamics are the U.K's oldest and most experienced water conditioning company with installations in some of the largest companies around the world. All our products are manufactured in the U.K with WRAS approval.

Our latest U.K specifications include the likes of Waitrose, Marks & Spencers, John Lewis, Burberry stores as well as many residential developments including large apartment blocks.

Globally we work with some of the largest companies in the world, 2012 projects include Kimberly Clark Italy, Unilever Argentina, US Navy & Kraft Foods South America,

Data Sheet 2012 - *Minitron*

Specifically designed for coffee machines and small ice makers

Supplied with plain ends suitable for flexi hose connections

Minitron is a unique limescale prevention system suitable for treating potable residential and commercial water supplies.

Minitron incorporates the unique catalytic alloy conditioning systems into a single compact stainless steel housing providing the most complete reaction available for calcium carbonate treatment.

Surface contact of water with treatment components is scientifically proven to create the most complete chemical reaction to precipitate CaCO₃.

- *Unique Catalytic treatment system.*
- *Independently proven technology over nearly 40 years.*
- *No power requirements.*
- *Easily installed*
- *No maintenance or servicing required*
- *Wras approved*

With no power requirements Minitron can be installed in isolated areas and either vertically or horizontal. Correctly installed Minitron will not have a dramatic effect on pressure losses with a loss of no more than 2% in most cases. Peace of mind for contractors, no electrical connections or power requirements are required and there is no mechanical parts that are subject to breakdown. Once Minitron is installed users can expect a minimum service of 10 years
