To Whom It May Concern

Our company installed SCALETRON catalytic water treatment units in the water supply pipe line for an ice processing machine and a coffee making machine

These equipments, ice and coffee are fed with soft and filtered water, and we have to perform regular regeneration of the softener resin and machine cleaning.

The equipment provided by CATALUB ,removed existing deposits that had accumulated despite being fed with" softened water" and this has eliminated the need to dismantle the equipment to perform maintenance and cleaning.

This application has shown the efficiency of catalytic treatment supplied by CATALUB, so we are planning the installation of this equipment in processes where water treatment is required at the hotel.

Sincerely
Jorge Noble
Maintenance Manager
CONTINENTAL HOTEL.
